## [VSCode ExtendScript Debugger] launch.jsonで指定したengineNameが InDesignのengineに生成されない

This question has been **Answered**.

標題の通りです。

ESDebuggerの仕様として`#target`と`#targetengine`を読み込まないのは理解してい て、

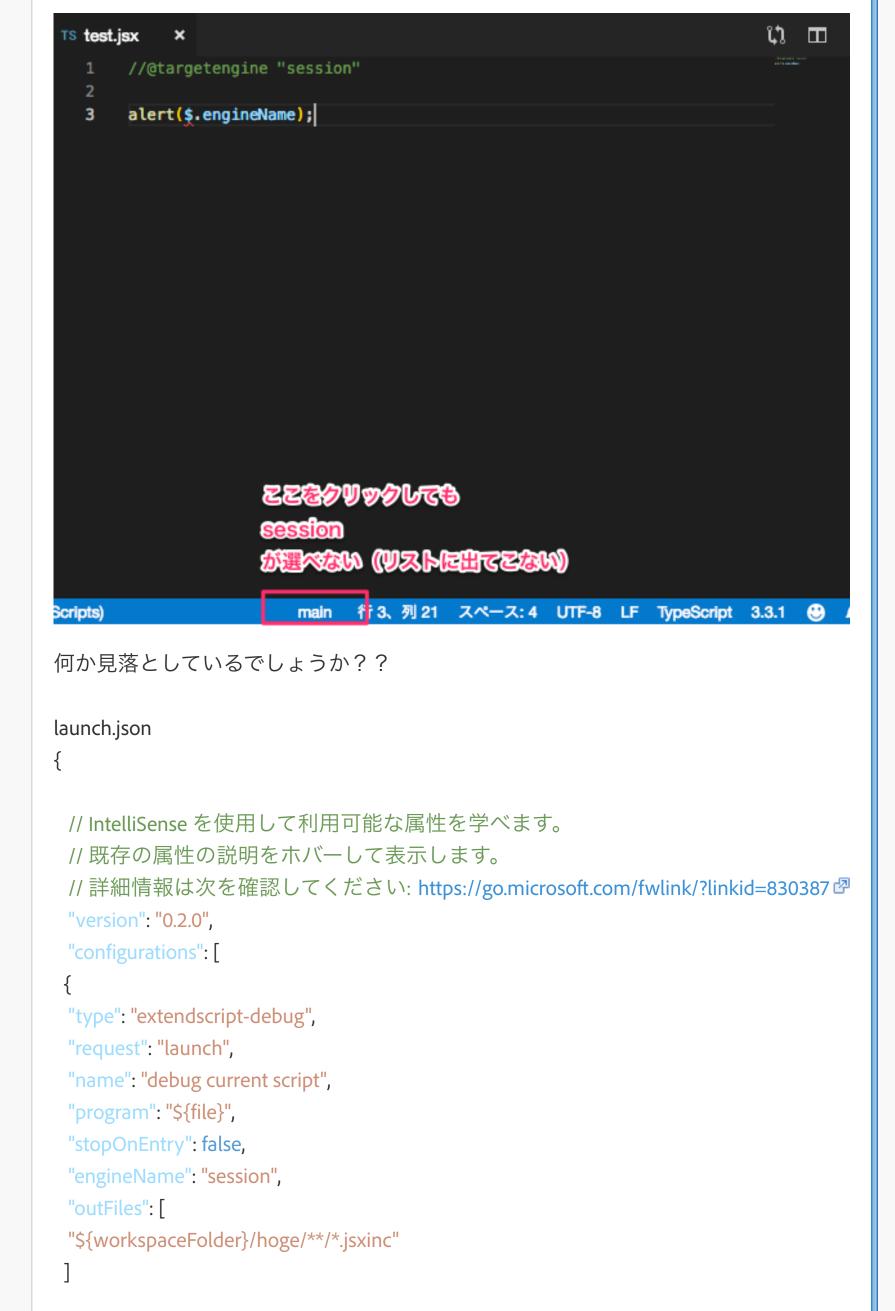

launch.json側でengineNameを指定してtargetengineを生成すると思っていました。

参照: ExtendScript Debugger - Visual Studio Marketplace 🗗

engineName	string	The engine name in which the program will	empty
		be debugged. For custom names, a new	
		engine will be created depending upon the	
		support provided by Adobe's applications	

- The debugger works like other VSCode debugging.
- If you experience any trouble setting breakpoints in files with extensions .jsx, then try disabling any previous extensions related to ExtendScript as those extensions can conflict with breakpoints functionality.
- VSCode ExtendScript Debugger extension and ESTK application can't run simultaneously.
- VSCode does not recognize #target and #targetengine commands.

そこでlaunch.jsonにengineNameを指定して実行したのですが、VSCodeのフッター部 分からengine名を選びたいのに出てきません。

```
}
]
}
```

## **Correct Answer**

by **10 A** on Mar 7, 2019 5:26 PM

engineNameの設定は以下のようにtargetSpecifierとセットで設定します。

```
01.
      {
           "version": "0.2.0",
02.
           "configurations": [
03.
04.
               {
05.
                   "type": "extendscript-debug",
                   "request": "launch",
06.
07.
                   "name": "Run Current Script...",
08.
                   "program": "${file}",
                   "stopOnEntry": true,
09.
10.
                   "trace": true,
                   "targetSpecifier": "indesign-13.064",
11.
                   "engineName": "test1"
12.
13.
               }
14.
15.
      }
```

```
launch.json — ScriptWork (ワークスペース)
{} tsco ターゲットアプリケーションのエンジンを選択
  1
        main
  2
        session
  3
        ConvertURLToHyperlinks
  5
        findchangequeryutils_export
  6
        findchangequeryutils_load
  7
        com.adobe.DesignLibraries.angular_Engine_Id
  8
        com.adobe.ccx.start_Engine_Id
  9
        testSession
 10
 11
        test
 12
        test1
 13
 14
                {
```

各targetEngine用の設定を用意しておいてデバッグウインドウのドロップダウンより選択できるようにしておきましょう。

Correct Answer Re: [VSCode ExtendScript Debugger] launch.jsonで指定したengineNameがInDesignのengineに生成されない

engineNameの設定は以下のようにtargetSpecifierとセットで設定します。

```
01.
      {
02.
           "version": "0.2.0",
03.
           "configurations": [
04.
               {
                   "type": "extendscript-debug",
05.
                   "request": "launch",
06.
07.
                   "name": "Run Current Script...",
                    "program": "${file}",
08.
                   "stopOnEntry": true,
09.
                   "trace": true,
10.
                   "targetSpecifier": "indesign-13.064",
11.
                    "engineName": "test1"
12.
13.
               }
14.
15.
      }
01.
      {
           "version": "0.2.0",
02.
           "configurations": [
03.
04.
                   "type": "extendscript-debug",
05.
06.
                    "request": "launch",
                   "name": "Run Current Script...",
07.
                   "program": "${file}",
08.
09.
                   "stopOnEntry": true,
                    "trace": true,
10.
                   "targetSpecifier": "indesign-13.064",
11.
12.
                   "engineName": "test1"
13.
               }
14.
15.
      }
```

Re: [VSCode ExtendScript Debugger] launch.jsonで指定したengineNameがInDesignのengineに生成されない

ありがとうございます。

`\$.engineName`もしっかり`"session"`を返してくれました。
